

$$R \times r = B \times b$$

$$R = \frac{B \times b}{r}$$

$$r = \frac{B \times b}{R}$$

$$B = \frac{R \times r}{b}$$

$$b = \frac{R \times r}{B}$$

Exemple :

2	10
15	r

$$2 \times r = 15 \times 10$$

$$r = \frac{10 \times 15}{2}$$

$$r = 75$$
